There is nothing better than keeping a tooth healthy and strong.

All interventions necessary to “fix” oral problems potentially have a negative affect on our health.

Illness begins in the mouth.
Oral Health

- The most significant aspect in health that is overlooked is that the oral cavity is a 100% direct reflection of the overall health of an individual.
- Oral Health is paramount in recovery of health vitality.
Oral Health

- Bioenergetic influences in the oral cavity are paramount in maintaining the “flow” of Qi in the meridians.
- There is a cause and effect relationship between “overall health” and “energetic health”.
- That relationship is demonstrated in the teeth.
Continual Exchange

Energy <-> Biochemical

BioMechanical
Oral Health

- The Energy System, the Physical Body, their mental nature, and the Biochemical aspects all inter-relate.
- Stress—is the underlying component in dental health.
  - Emotional Mental – pH – Calcium Loss
  - Physical Stress – TMJ  Jaw – Occlusions
  - Biochemical – Nutrition  Care

Stress -- Inflammation
Oral Health

- If the teeth have been lost, or are replaced or partially replaced, there is no “one” best solution.
- Each patient must be seen completely on an individual basis and they will all have their own unique issues.
Evaluation of the mouth
Phase One
Homotoxicology
Phase Two
Homotoxicology
Wisdom Teeth

- Sets Up Bowel / Heart Weakness
- Oseous Bone
- Osteitis
- Cavitation Site... May need Opened.
- Latent - Excessive Bleeding
- Infection – Active
  - Swelling
Wisdom Teeth

- Osteitis –
  - Terrain Factor
  - pH Driven
  - Inflammation Dependent
  - Immune Function Relevant
One - to- One - Miasmic Weakness

Child:
Age 8 - Accident Bruises
Age 12 - Kidney Infections
Age 18 - Root Canal
Age 54 - Prostate Trouble

Father has weak kidneys. Child gets the propensity and develops a kidney emotional coping style.
Many - to - Many
Dental Issues – SpectraVision

- Cavitations-Osteitis
- Root Canals
- Periodontal Disease
- Lymphatic Dental / BioMechanical
- BioCompatibility Issues
Cavitations – In Dentistry

- Cavitations are a softening of areas in the bone of the jaw. They are common in the jaw, surrounding teeth or tooth extraction sites. (Technically Osteitis)
- In these sites calcium has liquified and created softening of the jaw.
- Cavitations may contain
  - Bacteria
  - Fungus
  - Virus
Cavitations

- Cavitations may also have a cyst formed as a body type response in making a “cellular” casting in the jaw as an encapsulation in an effort to reduce infection.
- Some cysts may be surrounded by bone, which becomes hardened.
- Cavitations may have fats deposited in them.
Cavitations

- Cavitations occur at the extraction of a tooth, continued stress on the jaw from poor bite, or infections.
- Cavitations also increase due to CVD and reduced blood flow.
- Cavitations can be removed, and bone matrix replaced, however, cavitation sites won’t heal until the underlying terrain issue has been resolved.
Cavitations – Other Aspects

- Oseous Bone
- Osteitis
- Necrosis or Osteo Necrosis

- Common issue:
  - Reduced Blood Flow
  - Infection
  - Inflammation
  - Hyperthyroid / Calcium Issue
Cavitations – Nosodes

Cysts
  Follicular / Epithelial (pocket)
  Dental Sacs

Osteitis of Jaw
  ● Acute Bacterial (Infection Active)
  ● Chronic Bacterial (Unresolved)
    ○ Viral, Fungal, Bacterial Infections
  ● Fatty Osteitis
Cavitations – Nosodes

Root Granuloma – Infection in bone
Root Canal Tx – Use to detox.
Radicular Cyst – Use to detox.
Root Canals

- The pulp of the tooth, or soft tissue within the tooth itself, becomes damaged through dental procedure or decay.
- The pulp contains nerves, and blood vessels.
- The canal is cleaned and the tooth is killed by removing the nerve.
Root Canals

- The base of all root canals has a toxic substance that seeps into the jawbone.
- In some cases it can create a cyst.
- The root can have a metal pin placed in the base of the root with further creates a foci in the mouth.
Root Canals

- Should eventually be pulled if a person is in Phase 6.
- If the person is in advanced stages it may be a timing thing that may not allow the body to heal regardless of if the RC is in place or not.
- It is a difficult call to make.
Root Canals

- Because the total number of RC’s that a person has is “unique” for each person, one or ten could be the number that their body cannot deal with and it will finally become a cause of the decline in a person’s health.
Root Canals

- Chronic Pulpitis – Gangrenous Pulp
- Base of Roots
  - Fistula Dentalis
  - Dental Pocket
  - Fundus Abscess
- Acute Pulpitis
  - Hot / Cold or Pressure Sensitive
Dentures

- Some of the healthiest patients have had no teeth from late teens or twenties.
- They are healthier because they have no "systemic" access points from the teeth to create infections in the mouth.
Oral Health

- Teeth have a direct reflection on heart health.
- Proximity of teeth and lymph is critical to oral health.
Periodontal Disease

- Dental Root Inflammation
- Gingivitis
- Apical Granuloma
- Granuloma Purulent
- Necrotic Gingivitis
- Peridontal Fibroma
- Ulcerative Gingivitis
Periodontal Disease

- Xylitol as a toothpaste base.
- Ubiquinol and Ubiquinone as oral therapy.
- Chorella for oral rinse.
- Floss Regularly
- Clean Teeth Regularly
Dental Lymphatic Stress

- Dental Root Stress
- Dental Root Inflammation
- Acute Pulpitis
  - Mechanical
  - TMJ
  - Congestion in the Lymphatics of jaw
Instigators of Infection

- Parulis (Staph. Aux.)
- Parulis (Strep. Muc.)

- Common at the base of teeth:
  - Streptococcus
    - Faecalis
    - Mitis
    - Pyogenes
    - Infrequens
Instigators of Infection

○ Anerobic Infections

○ Streptococcus Mitis
○ Staphyloccoccin
○ Aerobacter
○ Aerobacter aerogenes
Nos. Folliculare Cyst

- Tries to localize the infection to just one tooth.

- Chronic Bacterial Osteitis of Jaw
  - Anerobic infection in the jaw bone
Teeth Extraction

- Let it bleed.
  - It will finish bleeding when it has fully cleaned the area.
  - Have the Dentist clear out the ligament (adjacent to the root).
- Cold Laser
- Tissue Salts
- Lymphx
Teeth Alignment / BioMechanical

- Dental Root Inflammation (mis-aligned)
- Dental Root Stress
- Parietal / Temporal Bone
- Occipital Condyles
- Palatine

- TMJ – Bite is critical
- Anger can lie in the jaw muscles.

Braces require metal detox support and lymphatic drainage.
Removal of Amalgam

- pH must be balanced
- Calcium Mineral Sets Deplete
- Zinc Depletes
- Sulfur Depletes
- Increases lymphatic congestion
- Toxify the bowel due to highest concentration of Sodium
Removal of Amalgam

- Toxify the Kidneys
- Toxify the Bladder
  - Sufonates --
Removal of Amalgam

- Stage One quadrant per time.
- Monitor pH constantly
- Begin with the least invasive quadrant.
- Lymphatic Drainage
- Calcium
- Micronized Chorella
- High Index Zinc/Sulfate
- Cilantro – Sulfur Based Foods – Cruciferous Vegetables
- Brown Rice
Removal of Amalgam

- Colonics
- Bowel Cleanse
- Vegetable Juicing
- Bland Diet
- Amino Liquitrophic
- Lipid Liquitrophic
- Vitamin C - Tissue Salts
Testing Chart

Tooth Point
Is on the lymphatic Meridian.

Above the large joint On the thumb.

Both Right and Left Hands.
Dental Procedure

- Localize on upper and lower lip.
- Localize on upper and lower cheeks.
  - (Both Right and Left)
Dental Procedure

- All points should read 50.
- If there is a drop, it is due to foci.
- Bridges will all have same reading.
Dental Procedure

- Address Oral Health early in balancing sessions.
- Offer dental solutions as final options.
Biological Dentists

- See the energetic relationships.
- Practice Homeopathy and Energy Balancing.
- Willing to see dental foci as causitive.
- Correct with minimal toxicity
- Treat Holistically
Biological Dentists

- Test for BioCompatibility
  - Materials used non-toxic
  - Tested against blood cytotoxic test.
  - Testing bioenergetically electrical
BioCompatibility

- Take the base reading of:
  - Lymph, Nerve, Allergy, Heart
  - Place potential dental material on the plate or test from matrix.
  - The new readings of all four points should show no change.
  - You are NOT looking for 50. You are making sure the dental product doesn’t change the natural readings of the meridians.
